**Infection Control is *everyone's* responsibility.  
Together, we can add more layers of patient protection.**

ICRA Best Practices in Healthcare Construction is verifiable training to ensure that your employees know the proper procedures for containment of infectious agents at an occupied healthcare facility under construction. We offer a 24-hour Qualification for carpenters and an 8-hour Awareness for all of your employees **free of charge**.

**ICRA-Trained Professionals Specializing in Construction**

## What is Construction ICRA?

ICRA stands for Infection Control Risk Assessment. The training courses are available for architects, hospital personnel, and construction professionals.

## Where are trainings hosted?

We train carpenters at our training facilities around the state or on jobsites with our mobile training unit. We train hospital personnel, architects, and other medical staff anywhere we need to be.

## How much do trainings cost?

Nothing. This training is free.

## Really?

Yes, we even bring lunch. And lunch is free, too.

## What's in it for the you?

According to the Centers for Disease Control, 13 people die per day in construction - related activities. This training saves lives, including our own.

This training is brought to you by the **Michigan Regional Council of Carpenters and Millwrights**, and is available free of charge to healthcare personnel, estimators, architects, infection preventionists, and skilled carpenters who work for one of our signatory contractors.
