

DIEKEMA HAMANN FIRM PROFILE

Firm History

Diekema Hamann Architecture & Engineering has experience in providing comprehensive design and engineering services for a broad range of projects. Originally established in 1916, DHA selectively draws on its experience of over 90 years to provide professional design and engineering services which meet each client's specific needs. Our firm's reputation is built on our successes in a variety of markets, with both new construction and renovation projects.

We recognize that every project has a unique set of circumstances that require innovative design and construction solutions. We develop a customized work plan for each project, working with the owner to determine which services are appropriate to meet their needs.

Diekema Hamann's staff is large enough to manage complex, multi-use projects, yet small enough to give personal service through small project teams. We believe in accountability. A project manager will be assigned to your project from the beginning through the one year warranty period. Everyone on the project team will be available to you for the duration of the project. We will conduct an 11-month, post-project walk-through of your facility to look for product defects and to make sure you're satisfied.

The combination of Diekema Hamann's background, highly motivated professional staff, and overall firm capabilities results in a team which offers you the following:

- A single source for architectural, interior design, mechanical and electrical engineering services;
- A background in design and technical expertise in healthcare and educational facilities projects;
- A history of excellent working relationships with past clients;
- Professionals selected specifically for your project; and
- A solid track record of bringing projects of all sizes to successful completion within budget and on schedule.

We develop an integrated project team of in-house architects, interior designers and engineers specifically for each project, based on the client's unique needs. This group will be with you throughout the project process to provide consistency and coordination. The team is lead by a project manager, selected for his or her specific expertise. The project manager will be the primary contact between the owner and the project team, allowing a single point of contact throughout the project process.

Diekema Hamann Architecture + Engineering excels at working as a team with your representatives to develop innovative solutions to challenging requirements. Meeting this challenge requires dealing creatively with the relationship of cost, time and quality. The goal of Diekema Hamann is to give you the best possible design solution for your program and budget requirements.
