

A COMMUNITY ENGAGEMENT AND RESEARCH-BASED APPROACH TO HEALTHCARE DESIGN

.....

Tribal Perspective

Seven Generations Architecture + Engineering (7GAE) is a Tribally-owned, 8(a) firm that specializes in the healthcare market sector. Every project awarded to 7GAE benefits from our Tribal perspective, culturally-informed approach, and emphasis on environmental sustainability.

Capabilities + Scale

Active listening, research, and engagement guide our healthcare work for Federal, Tribal, and community clients. Our team has experience from small clinics to entire ambulatory care campuses. Whether master planning a site, creating a community-focused wellness facility, or renovating inpatient spaces, the 7GAE team designs healthcare facilities that are a reflection of the people who use them.

Patient-Centered Design

Our vision for healthcare architecture and planning revolves around patient-centered design and the medical home model of care. Our designers hold ACHA and EDAC certifications and fundamentally understand how patients and staff shape the built environment. We engage early and often to design healthcare ecosystems that improve outcomes.
